

Surendra Rajput

Senior Full Stack Engineer | Ruby on Rails | React | Python | AI/LLM | SaaS

India (Remote) | surendrar7000@gmail.com | github.com/S-surendrasingh | linkedin.com/in/surendra-s-986715428

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with **8+ years** of experience building, shipping, and maintaining production web applications, SaaS products, and backend systems. Strong in **Ruby on Rails, React, Python**, REST APIs, PostgreSQL, Redis, background jobs, and cloud deployment. Experienced in end-to-end product development — from MVP features and API design to testing, CI/CD, production support, and scaling. Hands-on with **AI/LLM integrations**, payment workflows, and automation in real business environments. Comfortable working independently in remote startup teams, taking ownership of technical execution, and collaborating closely with product and engineering stakeholders.

CORE TECHNICAL SKILLS

Backend & Frameworks: Ruby on Rails, Python, Flask, FastAPI, Node.js, REST APIs, Microservices Architecture, Sidekiq, Celery, ActiveJob / Solid Queue

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, SQL, Elasticsearch

AI / Automation: AI/LLM Integrations, Generative AI, Prompt-based Applications, Workflow Automation

Cloud & DevOps: AWS (EC2, S3), GCP, Docker, Git, GitHub Actions, Jenkins, CI/CD

Integrations & Domains: Stripe, PayPal, Payment Webhooks, SaaS Applications, API Integrations

Quality & Operations: RSpec, pytest, Capybara, Playwright, TDD, Datadog, Sentry, PagerDuty, Agile/Scrum

PROFESSIONAL EXPERIENCE

MindNerves Technologies — Senior Software Engineer

2024 – 2026 | Remote

- Owned full-stack delivery of production web applications and APIs using Ruby on Rails, React, Python, and PostgreSQL in a fast-moving product environment
- Integrated AI/LLM capabilities into live application workflows, supporting prompt-based features and generative AI use cases
- Built and maintained reliable backend services, REST APIs, and background processing for production systems
- Improved application quality through automated testing, API testing, debugging, and production troubleshooting
- Collaborated with cross-functional teams to translate requirements into shippable features and maintain stable releases
- Supported CI/CD, Docker-based workflows, and ongoing production maintenance for business-critical applications

Builder.ai — Senior Software Engineer

2020 – 2024 | Remote

- Delivered full-stack SaaS and product engineering using Ruby on Rails, React, Python, Node.js, and REST APIs across complex business domains
- Designed and implemented backend systems, API integrations, and application features for production customer-facing products
- Worked with AI/LLM and modern software technologies to extend product capabilities and improve user-facing workflows
- Reviewed system behavior, identified defects, and resolved production issues through root-cause analysis and quality-focused debugging
- Partnered with development teams and stakeholders to clarify requirements and ship maintainable, scalable application code
- Contributed to testing, validation, deployment readiness, and long-term maintainability of production platforms

Kangaroo Software — Software Engineer

2018 – 2020

- Built web applications and REST APIs with focus on data handling, validation, and dependable backend behavior
- Developed core product features and backend integrations while working within defined functional requirements
- Performed functional testing, debugging, and defect resolution to improve application reliability
- Supported API development and data validation workflows for production-facing software systems
- Established strong foundations in software delivery, requirement analysis, and collaborative engineering practices

SELECTED PROJECTS

InterviewPilot AI

Tech Stack: Ruby on Rails 8, React, Electron, PostgreSQL, Solid Queue, OpenAI/Groq LLM APIs

- Led backend architecture for an AI-powered SaaS interview assistant with Rails + React web app and Electron desktop client
- Built shared Rails APIs, background finalization jobs, and LLM-powered workflows for summaries, scores, feedback, and practice mode
- Designed context-aware AI features using resume, job description, transcript, and session data with structured response validation

Payframe — Payment Platform

Tech Stack: Ruby on Rails, REST APIs, PostgreSQL, Stripe, PayPal

- Built payment platform features including Stripe and PayPal integrations with webhook handling for production transaction workflows
- Increased automated test coverage from 0% to 85%, reducing regression issues across payment flows
- Developed and validated REST APIs for reliable payment processing, data accuracy, and production quality assurance

LRQA — ESG Risk Management Platform

Tech Stack: Ruby on Rails, React, PostgreSQL, Redis, Background Jobs

- Built scalable ESG workflows and REST APIs for a production SaaS platform serving risk management use cases
- Improved API performance by up to 40% through query tuning, indexing, and backend optimization
- Developed export and reporting pipelines for large asynchronous workloads

Realtime AI Voice Conversion

Tech Stack: Python, FastAPI, Next.js, PostgreSQL, Redis, Docker

- Built an AI voice processing platform with FastAPI backend, Next.js frontend, and Dockerized deployment architecture
- Developed REST APIs and backend pipelines for voice enrollment, sample validation, storage, and AI conversion workflows
- Implemented testing and validation for API workflows, audio handling, and backend reliability across processing stages

Bynder — Digital Asset Management Platform

Tech Stack: Ruby on Rails, Python, PostgreSQL, Docker, CI/CD

- Migrated production applications from Rails 7.1 to Rails 8 with zero-downtime deployment
- Resolved critical security vulnerabilities across Rails, Python, and Go repositories in a large production codebase

EDUCATION

Bachelor of Technology in Information Technology

Malwa Institute of Technology, Indore, Madhya Pradesh, India | 2014 – 2018
